

UroChartEHR® AmerisourceBergen

Choose the EHR Designed With You in Mind

Using an electronic health record (EHR) today is essential. Working with one that was designed for your practice is smart.

The UroChartEHR® is a urology-specific EHR built to maximize efficiencies. Designed solely for urologists, UroChart includes turnkey urology-specific content that is easily customizable with an intuitive interface designed for touchscreen devices.

Increase your practice's productivity with the UroChartEHR Timeline feature. View all of your patient's medical history at a glance. Improve workflow by allowing multiple users to make updates to the same office visit and/or chart at the same time.

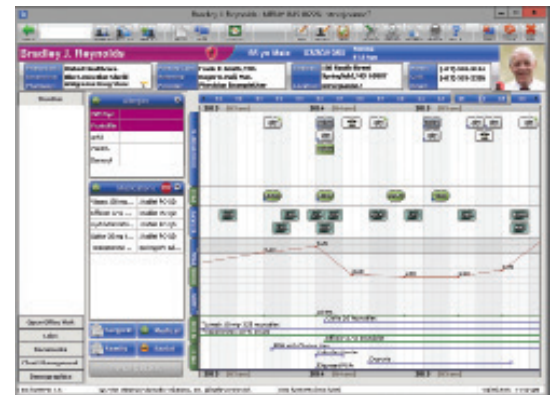

The built in evaluation and management (E&M) coding assistant helps you accurately and quickly code your visits based off the work and documentation that you do.

Seamless interfaces between UroChartEHR and practice management systems, labs, hospitals and more mean no double-data entry and no need to change your existing systems. Interfaced lab results will display on your UroChartEHR desktop, so you can quickly review and sign the results directly into the patient's medical record.

Other benefits of UroChartEHR include:

- Meaningful Use certification
- Discrete data capture that helps monitor and analyze your practice's productivity
- Improved processes that generate time savings in documentation and improvements in cash flow

To learn more about how the UroChartEHR was designed specifically for you, call 877-570-8721, ext. 2, or send an email to info@intrinsiq.com.
